METAJURE INSTALLATION REQUIREMENTS

Overview of the Installation Process
Time Needed: Installation and setup of the MetaJure server typically takes two to three hours. Installation of the PC client software (MetaSync) typically takes less than 5 minutes per PC.

>   **High Level Process:** At the highest level, the MetaJure installation steps are:
>   1. Set up a domain service account with read access to your servers
>   2. Configure locations to crawl
>   3. Install MetaSync client software on all of your company's PCs

Minimum Requirements: MetaJure requires Windows Server Operating System (2008 R2 or higher). The software can be installed on an existing Windows Server on your domain or on a new virtual machine located in your virtualization environment. The minimum virtual machine server configuration is equivalent to a large instance with the following specifications:
- 8 GB of memory
- Dual Quad-Core CPUs
- 200 GB of storage

Our MetaSync PC client runs on the Windows operating system. The following Windows configurations are supported:
- 512MB of RAM (minimum)
- Windows Windows 7, 8 and 10 (32- and 64-bit)
- Microsoft Office 2010, 2013 and 2016 (32- and 64-bit)

Supported Browsers (the vehicle through which the MetaJure Homepage operates) include:
- Firefox 3.6, 10.x, and latest
- Internet Explorer 9 and higher

- Safari (latest)
- Chrome (latest)

Information that you will want to have in front of you before beginning the installation includes:

1. Your service account username and password
2. The network locations you want MetaJure to crawl and index
